

Get involved with MiLH

We are currently looking for self driven and talented students to run operations at Minor League Hacking (MiLH). See a role that doesn't exist that you think should? Feel free to shoot us an [email](#).

Positions

Outreach and Operations

Minor League Hacking plans to sanction 20+ events during the 2015 Spring/Summer season and we need somebody to keep in contact with the hackathons to make sure everything is running smoothly and going according to plan. In addition, you will be in charge of talking to sponsors, schools, etc. and assisting in organizing MiLH sponsored events.

Hackathon Journalist

We constantly update our blog with tidbits from our events. You hold one of the most crucial roles at MiLH: to write about cool hacks at hackathons. We usually cover each one of our sanctioned hackathons with a summary article, in addition to covering cool high school student applications throughout the year.

Fullstack Developer

Minor League Hacking is built on Bootstrap and Angular. We plan to have a Node.js + Express backend for powering our gallery system. As a fullstack developer, you will be in charge of all aspects of the website. You must be willing to learn new languages and libraries.

Helpful traits

1. We look for people who are self driven and always go the extra step. We believe in the ideologies of "done is better than perfect" and "people over pixels".
2. Can write code or willing to learn. Having knowledge of this is important when working with Hackathons.
3. Attends lots of hackathons. We need boots on the ground at our events and this is super helpful if you are able to attend yourself.

Applying to MiLH

Send an email to jimmy@mlh.io with your desired position and resume/whatever. We'll reach back shortly to schedule a Google Hangout to introduce each other.
